

## Instructor-Led

### Amadeus Altéa Inventory for Altéa DC-CM/FM standalone

This course delivers a comprehensive overview of Altéa Inventory's system architecture and its integration with Altéa Departure Control, emphasizing seat management, aircraft configuration, and flight scheduling. Participants will take part in practical exercises to create and maintain aircraft setups, design seat maps, define seating business rules, manage flight schedules including locked flights and oversee the Schedule Entry Table (SET) process, all of which impact departure control operations during the flight window.

In this course, you will learn:

- > Identify Altéa Inventory's system architecture.
- > Navigate Altéa Inventory and Messenger viewer.
- > Create seat maps and work with different templates.
- > Recognize how schedule changes affect passenger reseatting.
- > Set up flight schedules and activate flights in the DCS operational window.
- > Manage the Schedule Entry Table (SET).
- > Investigate and resolve issues, such as locked flights.

This course covers the following topics:

- > Altéa Inventory's system architecture and Messenger viewer
- > Market groups, flight groups, and business rules
- > Seat maps and their templates
- > Seat rules and their impact on seat maps
- > Flight schedules and when they are triggered to Flight Management
- > Schedule Entry Table (SET)
- > Schedule changes and passenger reseatting
- > Schedule business rules, both mandatory and optional
- > Business rules for DCS triggers and Res-DCS exchange
